

KeyboardExpress™

The Keyboard Automation Tool

This is a great product! It has saved us thousands of dollars!

—Mark, New York

Keyboard Express is a keyboard macro utility designed to perform your repetitive keystrokes and free your time for more important tasks. It allows you to issue just about any series of keystrokes to your Windows® applications with the touch of a couple of keys or at predetermined intervals. Give it a try and see for yourself how much time Keyboard Express will save.

What is a Macro?

A macro is a set of commands that can be played back at will to perform a given task. These tasks may be something as simple as inserting your name and address into a word processor to something more complex such as launching a program, copying data from it, activating another program, pasting the data into it and repeating this several times. Tasks performed by macros are typically repetitive in nature, allowing significant savings in time by executing the macro instead of manually repeating the steps.

Building a Macro

There are a couple of ways to create macros with Keyboard Express. One method is to capture (record) your keystrokes. Start recording the macro and enter the keystrokes in your application. When finished, stop the recording and save. The other method is to build macros with the easy to use Macro Editor or Quick Macros Editor. Select from a list of commands and insert them into the macro. No programming skills are required.

Macro Playback Options

Play back macros in one of three ways. The most common method is to press a [hot key](#) combination such as CTRL+ALT+R or Shift F12. There are also a number of single keys that may be assigned as a hot key. In total there are over 700 different hot key combinations available. Or use the [shortcut](#) activation method. Just type a few letters to start a macro. The last option is to execute a macro on a [schedule](#). Program the macro to play back hourly, daily, weekly, monthly, at set intervals, when the program starts and more. Set up practically any type schedule with Keyboard Express.

Macro Scope

Keyboard Express allows you to place restrictions on a macro, as to when it should execute. You can assign global macros to play back in all Windows programs or Window Specific macros that only allow the macro to execute in a specific window.

Program Usage

Keyboard Express has nearly an unlimited number of uses. The program is designed to save you time and simplify the things you do on the computer. Below are just a few of the possible uses for Keyboard Express.

Text Type — Simply and quickly insert symbols such as ® £ % ¢ ™ or international characters such as á ü ñ Ö ç into documents. Insert frequently used text such as Name, Address, Letterhead or Boilerplate (legal, medical, real estate, more). Add a date and time stamp to documents, emails, etc.

Customer Support — Create answers to frequently asked questions and save them as macros. Instead of retyping responses to each repetitive email question, just press a hotkey. It's a wonderful timesaver. Create boilerplate text for price quotes, job orders, etc.

Internet — Create macros to go to your favorite web sites. Automatically fill in forms such as contest entries or order information forms. Perform web searches.

Programs — Automate tedious menu sequences in applications. Create macros to perform repetitive tasks in programs. Automate tasks between two applications (repetitively swap between windows, performing tasks such as copy and paste).

Launch programs — Schedule programs to run unattended with instructions of what should be done.

Other — Create reminder messages to pop up on your screen at specific dates and times. Automatically resize windows or move them to a different location on the screen.

Keyboard Express will save our group thousands and gain me recognition as a miracle worker. Thanks!

— Thomas, NJ

Features

- Activate macros with a hotkey, shortcut or schedule.
- Use Quick Macros to automate Windows functionality
- Assign macros to specific windows or make them global
- Record keystrokes or build the macro
- Quickly add, modify, delete, copy and move macros
- Import/Export single macro or a group of macros
- Automated backup of macros
- Print list of hotkeys for future reference
- Command line options such as Browse Mode (to prevent users from changing the macros) and loading in specific macro files
- Networking option with file locking capability

Text or Keystrokes

- Easily include special keys such as ALT, F1, LEFT ARROW, SPACE, etc.
- Insert symbols or foreign language characters
- Add date and time stamps to documents, emails, etc.

Program Activation/Internet

- Launch a program or activate (give focus to) a window
- Launch browser and go to specific URL's
- Instruct macros to wait until a web page has fully loaded

Schedule Macros

Schedule macros to play at given time intervals. Practically any schedule necessary may be developed. Below are the different scheduling options.

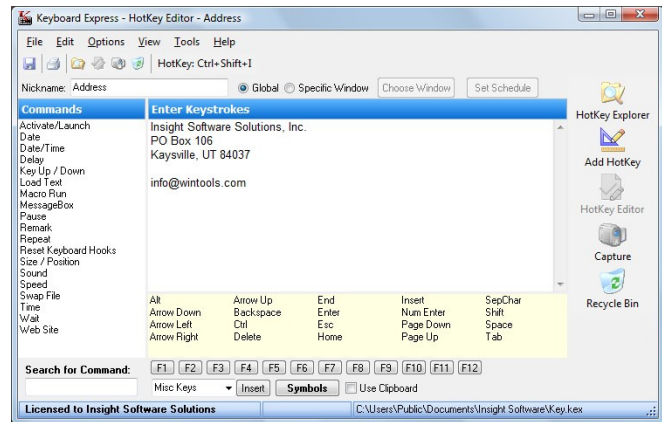

- At startup of keyboard express
- Hourly
- Daily (choose any or all days of the week)
- Weekly
- Monthly
- One given time
- Every "x" minutes
- After "x" minutes of computer idle time
- When a Keyboard Express macro file loads

Macro Timing

- Include delays or pauses in the macros
- Wait commands for more precise macro timing
- Add instructions or comments for users during pauses
- Keystroke playback speed option

Other Macro Commands

- Place macro steps in a repeat loop
- Play back sounds during macros
- Embed comments in macros for macro clarity
- Have one macro run a second macro
- Position and/or resize Windows of other applications
- Load in a text file during macro playback and process as part of the macro

System Requirements

- Pentium or equivalent processor or greater
- Runs on Windows XP or later
(64 bit and 32 bit versions)
- 30 MB hard disk space

Technical Support

We offer a variety of support options on our web site at www.keyboardexpress.com.
You may contact us by email or phone.

Thanks to your program I will be getting a raise.

— Smith, Texas

It is the single most useful program I have ever installed on my system!

— George, Australia
